Paperless Vehicle Sales & Electronic Odometer Disclosures Now Here-- Vehicle to Vehicle (V2V) Leading to Vehicle to Government (V2G) Next.

December 2015

The Situation:

A key measure contained in the federal Fixing America's Surface Transportation Act (FAST Act) will usher in an era of paperless vehicle sales and pave the way for vehicle-to-government (V2Gov) transactions.

The language contained in the 1,300-page transportation bill that Congress recently passed and as signed into law by President Obama Friday, allows states to move forward with programs to implement electronic odometer disclosures, notices, and related materials as long as those processes provide appropriate authentication and security measures.

The Significance: [What does this mean to dealers & consumers?]

This advance in vehicle registration will allow for the modernization and expediting of motor vehicle registration nationwide.

Existing federal law requires odometer disclosures to be hand-written, slowing the efficiency of all vehicle-related transactions, including sales and registration. While a provision in the 2012 federal transportation bill called on the federal National Highway Traffic Safety Administration to implement new rules to allow for electronic odometer disclosures, the agency has yet to propose those rules.

What the author of the language in the e-odometer programs bill, Sen. Steve Daines (R-Montana) had to say:

“From shopping online to buying houses, the use of electronic signatures has made everyday transactions and once-in-a-lifetime purchases simpler for American families. However, Americans have been prohibited from using this technology to its full potential in vehicle-related transactions,”

“We can't allow federal inaction to impede innovation. This provision gives states the authority to act, since the federal bureaucracy will not, and implement their own electronic odometer disclosure programs.”

Paper Vehicle Registration is history

Per John Brueggeman, a former state senator from Montana and executive vice president of the California-based Motor Vehicle Software Corporation (MVSC), who said:

“As vehicle-to-vehicle communication becomes more widespread, vehicle-to-government communication is a logical next step.”

“The paper registration process is outdated. “ We live in a digital economy and this new law will not only allow for a faster and more convenient process for automobile buyers, but it will also increase accuracy and efficiency at state motor vehicle departments across the country.”

Who was the driving force to make this happen in California?

MVSC, a leading national provider of electronic vehicle registration technology and services, led the effort to include the provision in the Highway bill along with the National Auto Dealer Association (NADA) and state auto dealer associations throughout the country. The groups praised Sen. Daines for his leadership in making sure the e-odometer language was included in the final bill.

The perspective of Brian Maas, president of the California New Car Dealers Association:

“The e-odometer language included in the transportation bill removes one of the last major impediments to fully electronic consumer vehicle purchase transactions,” “This opens up the field for entrepreneurship and innovation for dealers to move from paper-based transactions to an electronic transaction system. We hope California and other states take advantage of it.”

What you need-to-know about Motor Vehicle Software Corporation

Based in Southern California, MVSC is a next generation public-private partner. Its focus is on developing innovative technology and process management solutions in partnership with state government agencies and businesses across the United States. For the past decade, MVSC's technologies and systems have transformed and driven market efficiencies. MVSC's electronic vehicle registration solution, DMVdesk, currently eFiles more registrations in California than any other provider. MVSC also offers its Registration Management Professional (RMP) training program designed for title and registration clerks at all levels. Visit muscusa.com.
